

# Web Programming Assignment 1

---

## Instructions

Students are asked to work **individually** for this assignment, but are encouraged to seek help from classmates and teaching staff. It is designed to be a short "confidence building" assignment to help you get set up on the core teaching servers and make sure assignments 2 and 3 go smoothly.

An official submission must be made at the start of week 4 via **Blackboard**:  
**Monday 8th August 2016, 4am.**

Just the modified home page in lab 1 needs to be zipped and submitted (no images!)

**If you complete the assignment ahead of time, teaching staff may mark you on the spot, leaving you free to work on other assignments.**

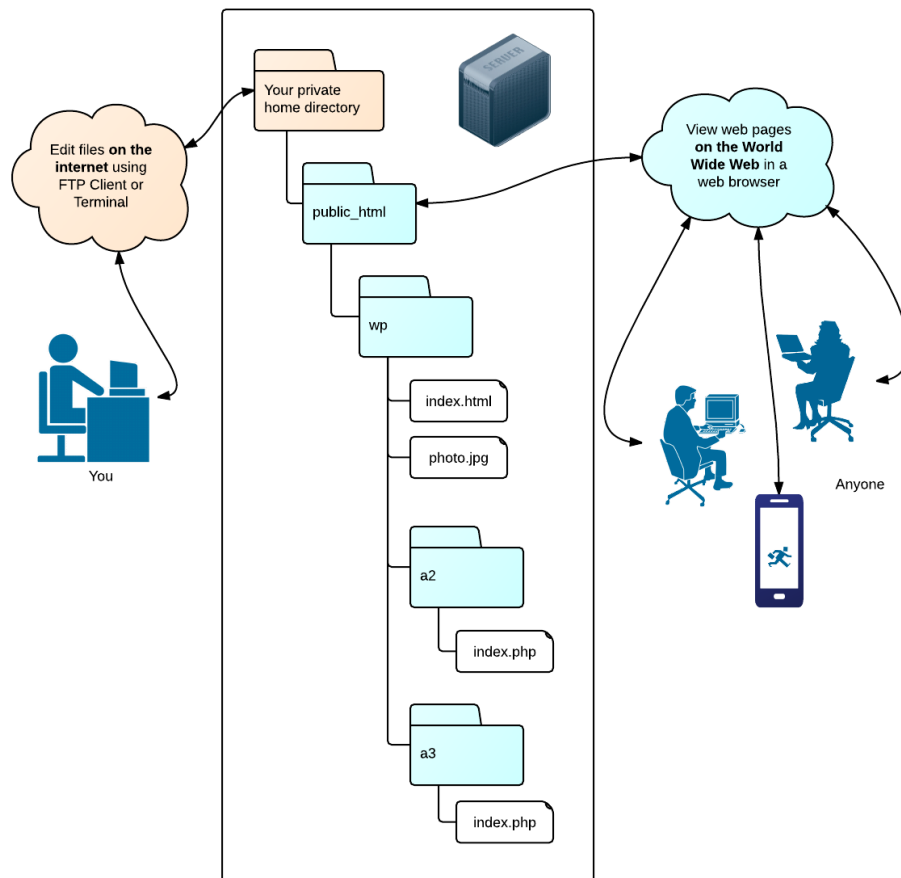

## Overview

In the first tute lab, you are asked to

- Connect to your account on the coreteaching servers,
- Create public\_html, wp and two assignment directories (a2 and a3)
- Give the above directories and your home directory correct permissions (ie 701)
- Download a starting HTML webpage and personalise the content
- Embed a photo (preferably you) that is 200px by 200px into the above page
- Create holding PHP pages for each of the assignment directories
- Give the above files correct permissions (ie 604)

**When you do these things, Assignment 1 is complete!**

# Web Programming Assignment 1

## Marks Allocation

5 marks or 5% of your final grade

### Website structure (3 marks):

- |   |        |
|---|--------|
| All directories and HTML home page created                    | 1 mark |
| Two PHP holding pages (can be blank) in a2 and a3 directories | 1 mark |
| All permissions correct, all 3 files viewable at correct urls | 1 mark |

### Page content (2 marks):

- |  |        |
|--|--------|
| Homepage content is adapted with student details | 1 mark |
| Image embedded correctly, is 200px by 200px      | 1 mark |

**Total: 5 marks (or 5% of your final grade)**
